## ABOUT US

Hangzhou Metek Co. Ltd is an excellent manufacturer of barn door system. We have been designing and manufacturing sliding door hardware since we are founded. Metek has created a wide variety of new designs to meet clients' requests, including the using of different materials (carbon steel, stainless steel and aluminum...), and investing large amount for R&D every year. With the strength of product innovation, superior craftsmanship, high quality products, best price in the market, quick delivery and outstanding customer support, Metek is becoming a leading supplier in this industry.

What's more, we always challenge the limits and go beyond ourselves. Since 2015, all the Metek barn door systems are produced under the standard of ANSI/BHMA A156.14-2013, and some specific models are tested by the Intertek Lab.

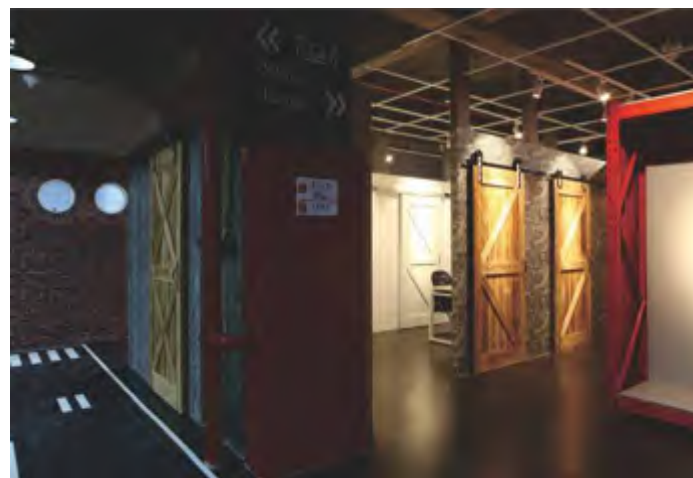

Choose Metek, you deserve better!

## OFFICE

New office could offer employees a better working environment, which makes us to focus on the product itself. And we do believe a good test on the design is a very important factor to offer our clients good products constantly.

## DESIGN

Cooperating with an outstanding foreign design studio, we keep working on new designs. Some of the designs are already put into mass production and earned favourable comments among the clients. We are also trying to apply the patents to protect each of our own designs.

## PRODUCTION

All of our productions are under the standard of ANSI/BHMA A156.14-2013. With professional testing equipments, we test all of our products especially the new items frequently in our own lab. And the most popular models are also tested by the Intertek Lab. If the reports are requested, do not hesitate to e-mail us!

## FACTORY

With perfect management system and production flow, our factory passed kinds of Factory Audit. Not only the audit by clients but also some third party audit. We are also trying to improve our facility to meet more and more clients' requirements.

## A01&TC001 BYPASS DOORS

No enough room for the track? Try our bypass doors! Two doors work on the separate track and the tracks connect by several jonits(TC001). It could realize two doors with the lest space.

If the room is large, why not try our track connector(TC002,check page 50) which could extend the track length at the same level.
